Despite being the current trend in the music industry, AAC offers very poor sound quality, which is why the technology was soon abandoned. So let's try to use an AAC audio file as a system file so we can make it play in any device and get a better sound quality. First we need to download an AAC file. For the sake of the exercise we use iTunes music sample, so if you want to try it out on your device just search for "samples" and you will find plenty of songs and albums to download. The next thing to do is to copy the AAC file to the root of our SD card (not in any folder, just the root) and rename the file to "system.aac". Now we are ready to try it. First we need to transfer the file to the Android device we want to test it on. The easiest way to do this is to use a custom Android ROM. 2. Transfer the AAC file to the phone In order to use an AAC file as a system file, we need to first download it on the computer and then transfer it to the phone. To do so, we need to put the AAC file in a folder with .aac extension and then drag and drop it into a folder where you can see the microSD card icon. Once we have the file on the phone, we can now test it. 3. Test the AAC file If you are not sure which Android device you are using, you can test it by creating a folder on the phone with .aac extension and then you should see it on the list of
