What's New In Backup Cow?

Backup Cow is a complete file backup and synchronization tool that can back up multiple computers and sync them to each other over local network. The backup software can even backup and sync files between different computers over the Internet, intranet or any other computer network. Backup Cow also supports file encryption and password protection for file recovery and password protected folders for convenient backup. The software can even encrypt network folders and backup and synchronize files between computers without administrative permission. Features: The features of Backup Cow are: * File and folder backup - It can backup files and folders from your computer and synchronize them to other computers on the network. * Folder synchronization - It can back up all the files and folders in a folder, synchronize them to other computers and even make them accessible on FTP server. * Password protected folder - You can back up a folder and password protect it. By this feature you will have secure access to your backup files. * File encryption - This is the most useful feature that can encrypt files before backup and password protect them after the backup. It can also backup encrypted files and encrypt your files or folders before you upload them on FTP server. * External hard drive backup - You can use it to backup files and folders to external hard drive. * Network folder backup - You can use it to back up and sync files and folders from computers and even make them accessible to FTP server on the network. * The software comes with a built-in FTP server that supports the following protocols: - Secure ftp - Unencrypted ftp - Sftp - Passive ftp System Requirements: Windows XP/Vista/Windows 7, Windows 8, Windows 10 CPU: 2 GHz RAM: 1 GB Hard Disk Space: 1 GB Interface: The interface of Backup Cow is very simple. It does not have any wizards and dialog boxes, and can be operated with a single mouse click. Use the GUI (graphical user interface) to perform backups and file synchronization. Click the "File & Folder Backup" button to start file backup. Click the "Synchronize files" button to start file synchronization. Use the "Folder synchronization" button to synchronize files and folders in specified folder. The backup tasks are similar to computer backup, except that you have to backup files and folders that are not included in your backup list. It is the same to backup your network folders. Screenshots: Click this link to view the screenshots: [What's New in 2.0.2](#): * Fix: It cannot sync files in MacOS 10.10.2 due to bug

System Requirements For Backup Cow:
